Make a Victorian school

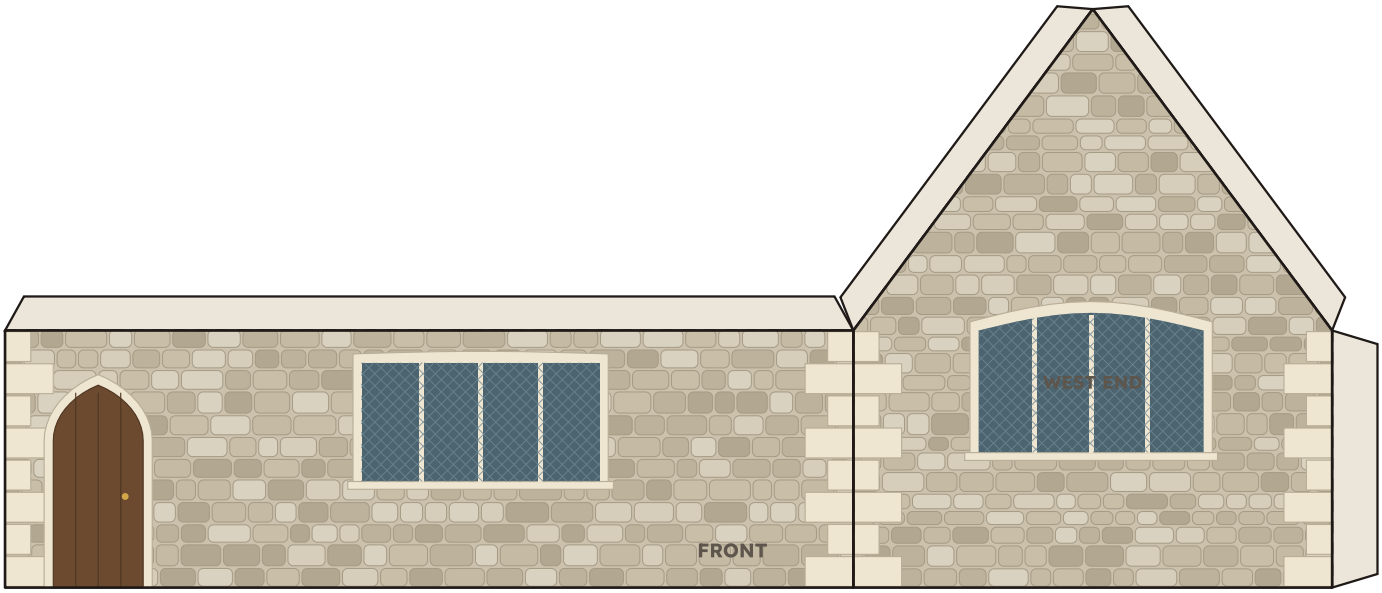

15 POINTS

This is a real school, built in 1852 for fifty children. Its architect, Joseph Clarke, drew the plans, and every window and door here is where he put it. It is 1/72 of the real size.

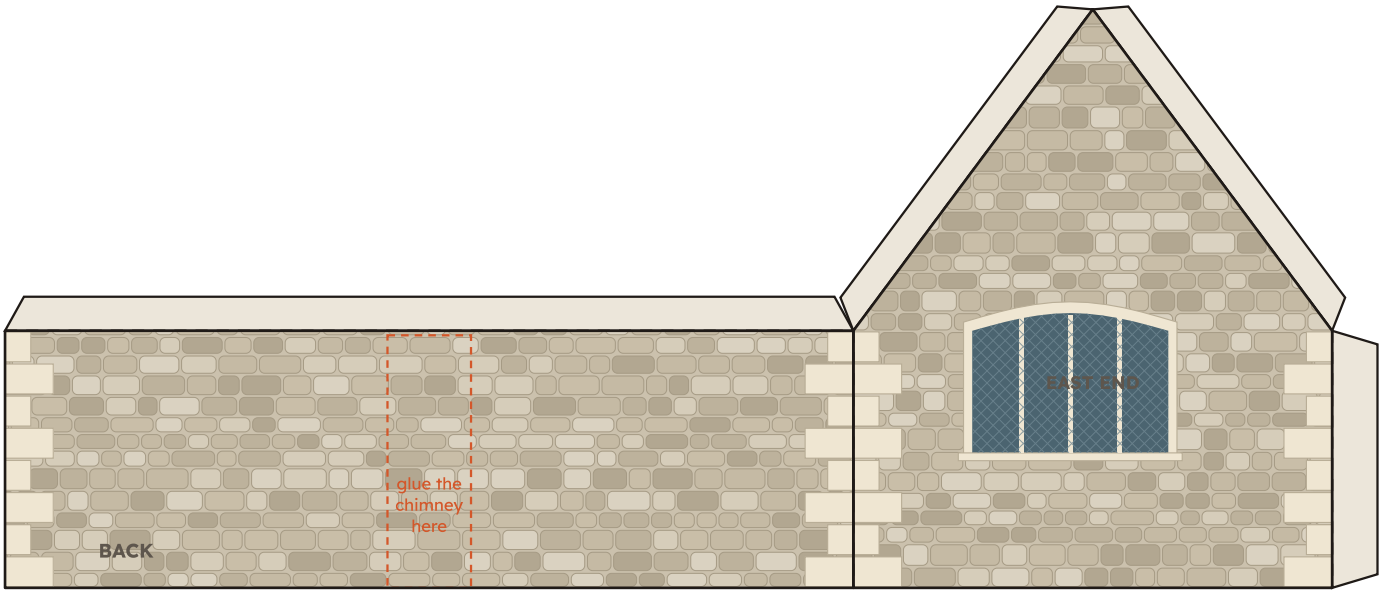

——— cut -------- fold ▭ glue tab

Print on thin card if you can. Ask a grown-up to help with the scissors.

1

2

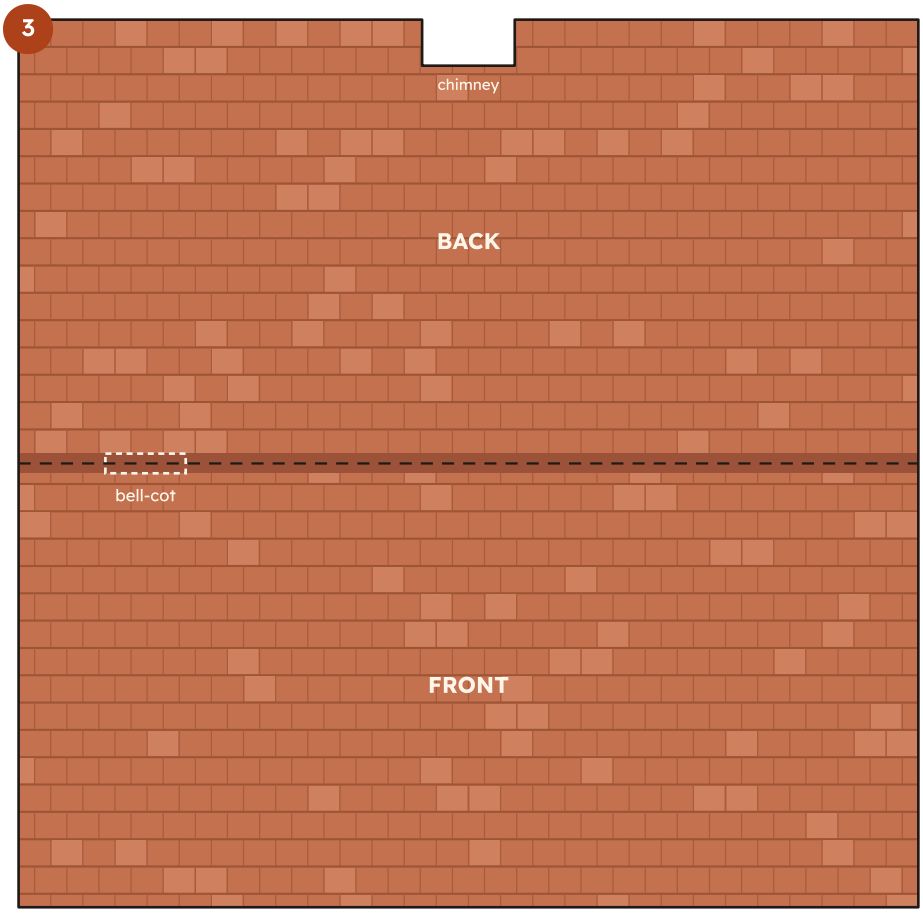

Sizes from Joseph Clarke, Schools and School Houses (1852), Plate 1: the room is 24 ft by 12 ft 6 in inside, the walls are Kent ragstone with pale Caen-stone corners. Heights are measured off his drawing.

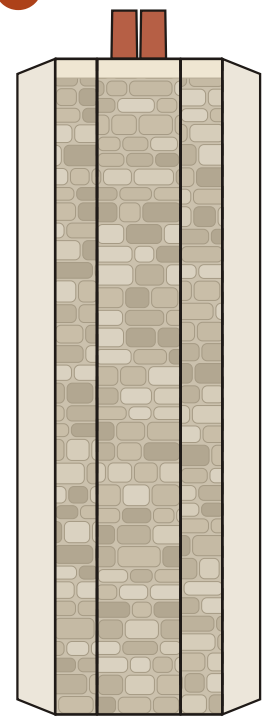

Victorian school: roof, porch, chimney, bell

15 POINTS

3

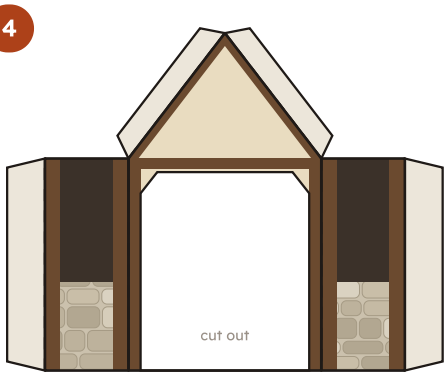

5

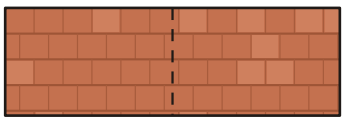

6

4

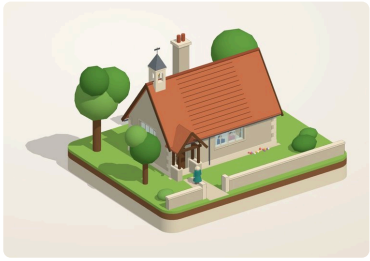

1. Cut out every piece. Fold back the dashed lines and the grey tabs.
2. Glue wall **1** to wall **2** with the side tabs, to make a box with no lid.
3. Fold the roof **3** along the ridge and glue it on the tabs on top of the walls, notch at the back.
4. Glue the chimney **5** on the back wall, the porch **4** round the door, its roof on top.
5. Stand the bell-cot **6** on the ridge at the porch end.

Make a modern school

15 POINTS

Architects today build schools from timber and glass, with gardens and playgrounds on the roof. This one has an orange top floor that sticks out over the front door, and a running track on its roof!

Ideas from schools that architects publish on Dezeen: timber cladding, big windows, a green roof with solar panels, a top floor that "cantilevers" out over the door, and places to play up high.

11

9

12

1. Cut out every piece. Fold the dashed lines and glue the grey tabs inside, to make two boxes.
2. Glue the orange box **8** on the timber box **7** where it says, so it sticks out over the glass entrance.
3. Zigzag the steps **9** and glue them to the end of the timber box, up to the green roof.
4. Fold back the tabs and stand up the trees and the sign. Write your school's name on it!
