My modern bathing machine: the plan

10 POINTS

Architects draw a building from above (a **plan**) and from each side (**elevations**). Here is my machine drawn the same way, to scale: **1 square is 1 metre** on the beach.

Plan, from above

the stage is at the bottom

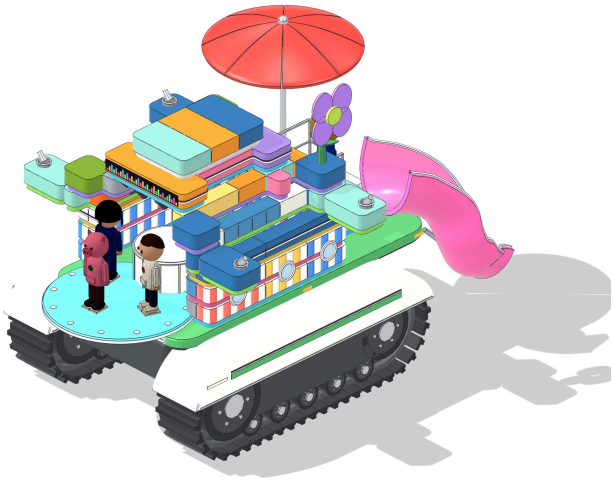

10 m long
from the stage to the end of the slide

6.4 m wide
from one fountain to the other

7 m tall
to the top of the flower

6.8 m tracks
each as long as a big car and a half

The machine in 3D

1. **Caterpillar tracks.** No horse needed: it drives itself over the sand and into the sea.
2. **A stage for a rock band,** round, at the front, under a roof.
3. **Fountains** at the tips of four arms, to cool everyone down.
4. **A curly slide** from the back deck down into the sea.
5. **A shade** on a tall mast over the slide.
6. **A flower** that spins in the wind, like a little wind turbine.
7. **Changing rooms** inside, like a Victorian machine, striped like beach huts.
8. **A rooftop** in three colours.

Your turn Draw your own machine from above. 1 square is 1 metre: how long will yours be?

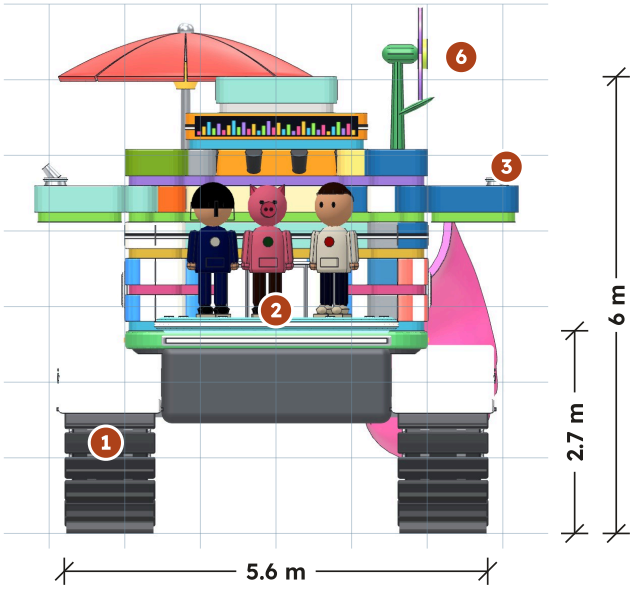

Name _____ Date _____

Elevations: my machine from each side

10 POINTS

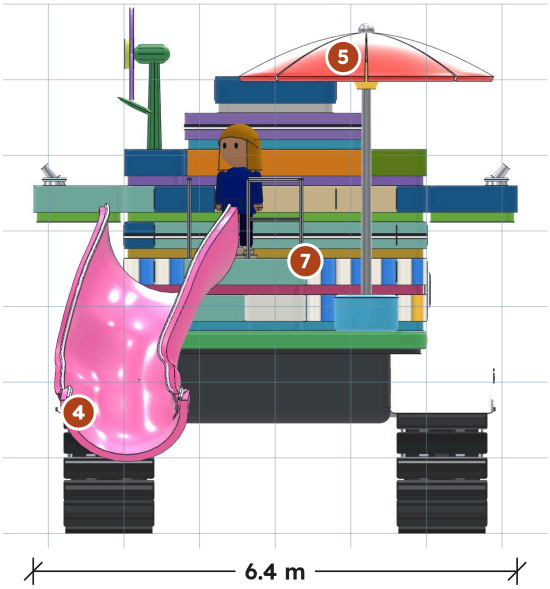

Front

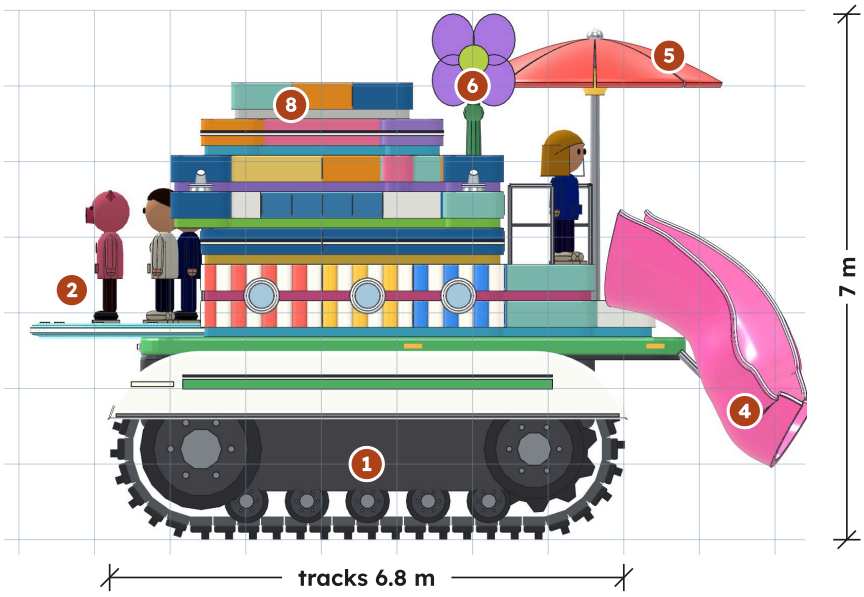

the stage

Back

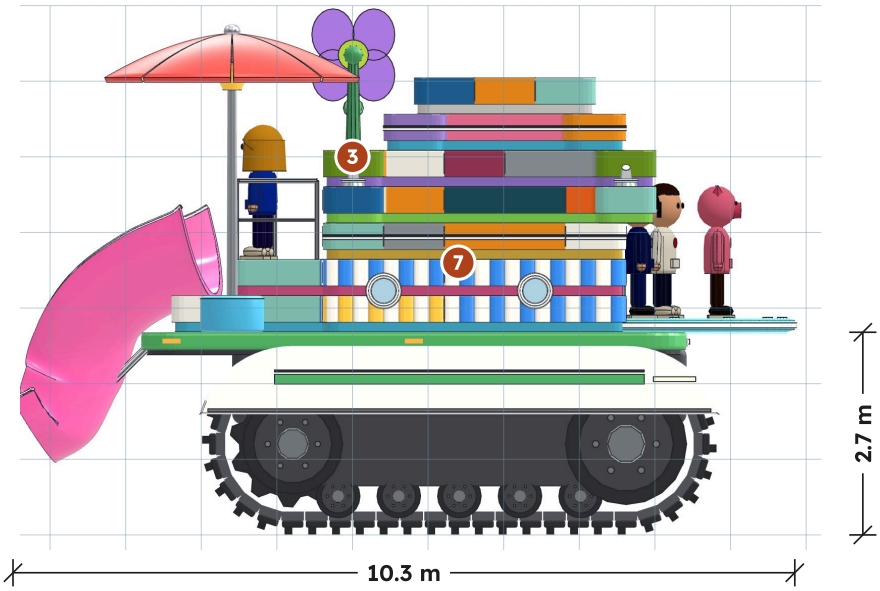

the slide

Left side

The stage is on the left, the slide on the right. Can you find the flower that spins in the wind?

Right side

Count the squares: how tall is the deck? How long is the whole machine?

Name _____ Date _____
